

ONUR MERT ANARAT

Software Developer

My defense thesis at the university, focusing on artificial intelligence and image processing, gave me the opportunity to work in depth in Python and C# languages. The various projects I carried out with these programming languages helped me build a solid foundation in software development. I'm constantly improving myself, especially in my areas of interest such as artificial intelligence and image processing. My motivation to quickly adapt to new technologies and take an active role in innovative projects is always high.
